

PKU Baby 20 x 500mL bottles

Home Delivery
Available Now

PKU Baby is an amino acid formula with fat, carbohydrate, vitamins, minerals and long chain polyunsaturated fatty acids without phenylalanine and supplemented with docosahexaenoic acid.

This infant formula is for the dietary management of phenylketonuria (PKU) from birth to 1 year of age and is considered food for special medical purposes.

- Ready to take formula compared to the hassles of powder preparations.
- Each bottle contains 10g of protein in 500mL.
- Available in packs of 20 bottles with a maximum dispensing quantity of 2 per script.

Dosage instructions:

Shake the bottle well.

Pour the required quantity (as advised by the dietitian) into a sterile feeding bottle.

Can be taken at room temperature or warmed if desired.

Maximum heating temperature 37°C.

Storage:

Unopened: Store in a cool, dry place.

Once opened: Resealed in a refrigerator. Should be used within 48 hours.

Allergen declaration:

Contains oil derived from fish sources, milk product (lactose) and nut product (walnut oil).
